Additional Information:

Work Orders: For all system overhauls and similar, there is a master work order for the system and a separate work order opened for each Line Replaceable Unit (LRU) inspected / repaired. A work order is opened for any technical inspection; if no repairs are needed, the work order is for the inspection only.

TWS: Full maintenance is being consolidated at Fort Bragg RSC; other sites store, receive inoperable TWS from units and pack/wrap/ship to RSC at Bragg for repair and / or disposal. Afghanistan RSC shall continue full maintenance.

Prophet: Spiral 1 Only - Does Not Include Prophet Enhanced systems

MILSTD Generators, Kuwait: Theater generator rebuild / overhaul facility, staffed primarily by Third Country Nationals (TCNs) hired through the contract. Average man-hours per workorder - 125.

Patriot EPP-III Powerplants: Work orders are for major overhaul and rebuilds; each work order averages 410 man-hours.

Vehicle Optics Sensor System (VOSS): VOSS is a vehicle mounted, gyro-stabilized, telescoping, high-resolution, zoom-capable triple sensor (daylight camera, night-vision camera, thermal-imaging camera) surveillance system that enables Soldiers inside the vehicle to visually scan, locate, and identify suspected improvised explosive devices (IED), explosive and potential hazards, indicators, and activities far forward of the formation. A primary component of VOSS is the mast-mounted Gyrocam camera system. In SWA, the contractor shall perform sustainment maintenance including system and line replaceable unit (LRU) repair, system installation de-installation, integration, operator training, and supply chain management, to include direct pack, wrap, and ship support for transshipment of VOSS and VOSS components between operating, storage, and maintenance locations. The contractor shall maintain equipment status on all installed systems and major LRUs per task order availability metrics. The Government will provide spare and repair parts to the contractor. In the event that maintenance actions require increased quantities or parts that were not previously identified based on usage rates or design changes, the contractor shall procure the parts. The repair and return of shop replaceable units (SRUs) by outside sources may be required. The contractor shall de-install and re-install "existing" systems as required. The contract shall also manage and execute the return maintenance authorization (RMA) program for the repair of the gyrocam and components in CONUS by the OEM. Work order numbers shown includes RMAs (RMAs comprise 50% of work orders). Contractor shall anticipate receipt of estimated 200 RMAs at start of contract, management and accountability for these shall transition to winning contractor from current contractor. In CONUS, the Contractor shall provide the following services: sustainment, repair, maintenance, system installation/de-installation, fielding activities, integration, operator and maintenance training, and supply chain management, to include direct pack, wrap, and ship support for transshipment of VOSS and VOSS components between operating, storage, and maintenance locations. VOSS fielding support will support multiple fielding events at various CONUS locations for VOSS systems. Maintenance support post fielding may require support R-VOSS (SDIK): SDIK is used for sharing data between two similarly equipped vehicles. One VOSS SDIK consists of two transmitters (L-3 Comm Mini-CDL-200 or DTC/LMGS Palladium II) and five receivers (OSRVT or Palladium II). The Contractor shall maintain R-VOSS and, as tasked execute system

CREW: Primarily support Duke (all versions), also Thor III and CREW Universal Test Sets (UTS). Contractor shall store (as theater reserves, Operational Readiness Floats (ORF) and prepositioned stocks) 5000 CREW systems (predominantly DUKE (V2 and V3) in Kuwait and 600 in Afghanistan; PM will formally account for these items with contractor executing specific storage and inventory functions. Estimate 50 maintenance actions, per month, in Afghanistan and 300 per month in Kuwait. For system installations and de-installations, estimate is 50 per month in Afghanistan and 100 per month in Kuwait.

MX Sensor: Only supported in Afghanistan; defensive components tested in Afg and shipped to OEM for repair and return. MX-Sensor is an Electro-Optical Infra-Red payload integrated on multiple ISR manned and unmanned platforms; MX provides the platform enhanced full-motion video to acquire, discriminate, and engage targets and to gather intelligence. CFRs complete field-level repairs, provide engineering and platform integration support and training support. Current staffing - Two OEM (L-3 EO/IR) employees, based at Bagram.

LCMR: Full support at Fort Bragg RSC only; maintenance & fielding Support, integration, testing and repair of CPI Cab Kits, paint services, P/W/S, S/S/L, Radio & TPQ-50 operational testing.

Q53: Full support at Fort Bragg RSC only; testing and repair of the ECUs, Generators, fielding support and maintenance of vehicles to include paint services.

WIN-T: COSIS Maintenance WIN-T Inc 1, Warehouse (150,000 sq/Ft-Bragg), support includes inspection, repairs / maintenance, storage, and transport / shipment support. There are several hundred Satellite Transportable Terminal (STT) Lot 9 and STT Lot 10 systems [which include HMMWVs], Satellite Trailers, Generators and ECUs) in storage at Bragg plus another 3000+ items (see attached inventory) but most never require a level of effort that could be listed (majority require no more than quarterly inventory to verify location and quantity.

PM REF COSIS Support, Fort Bliss: See PWS paragraph C.5.10.6 for additional information. Work orders shown are for initial inspection and for work completed to make fully mission capable. In most cases, only calibration and cleaning needed.

Intrusion Detection System (IDS) (Italy): For the IDS, RSC technicians provide technical consultation with DES (Directorate of Emergency Services) regarding current and future equipment in support of US Army Garrison - Vicenza (USAG-V) security posture. The task includes requirements survey, research, design, and implementation of electronics security and communications technology for these supported systems and tasks: IDS (Intrusion Detection System), AACs (Automated Access Control), MMS (Mass Notification System), CCTV (Closed Circuit Television) and IPTV (Internet Protocol Television)

EMARSS: The EMARSS is a manned multi-intelligence Aerial Intelligence, Surveillance and Reconnaissance (AISR) platform providing a persistent capability to detect, locate, classify/identify, and track surface targets in day/night, and disseminate this information The contractor shall perform maintenance and repair services including but not limited to fault diagnosis, screening, repair, overhaul, refurbishment, calibration and alignment. The Contractor shall be mobile and able to deploy to both CONUS and OCONUS locations. EMARSS consists of the EMARSS Maintenance Vehicle (EMV) LYN 205166, NSN 6230 01 011 00201, EMV 40141001, EMV 40141002, EMV 40141003, EMV 40141004, EMV 40141005, EMV 40141006, EMV 40141007, EMV 40141008, EMV 40141009, EMV 40141010, EMV 40141011, EMV 40141012, EMV 40141013, EMV 40141014, EMV 40141015, EMV 40141016, EMV 40141017, EMV 40141018, EMV 40141019, EMV 40141020, EMV 40141021, EMV 40141022, EMV 40141023, EMV 40141024, EMV 40141025, EMV 40141026, EMV 40141027, EMV 40141028, EMV 40141029, EMV 40141030, EMV 40141031, EMV 40141032, EMV 40141033, EMV 40141034, EMV 40141035, EMV 40141036, EMV 40141037, EMV 40141038, EMV 40141039, EMV 40141040, EMV 40141041, EMV 40141042, EMV 40141043, EMV 40141044, EMV 40141045, EMV 40141046, EMV 40141047, EMV 40141048, EMV 40141049, EMV
